

Wave Modular

Catamaran Workboat

Hull Form

The Wave Modular catamarans have been developed to provide large self-propelled working platforms for use in sea farming, harbours and other sheltered locations and will carry high payloads and operate as crane barges. The modular construction allows the vessels to be transported by road or sea in an economic manner.

The vessel shown is equipped with an adapted hydraulic crane and is used in mussel farming.

Principal Dimensions

| | |
|-----------------------|--------------|
| Length overall: | 12.0m |
| Beam overall: | 5.0m |
| Displacement (light): | 4.5t |
| Payload: | 10.0t |

Main Features

- Vessel dimensions are variable to suit its application
- Vessels can be containerized
- Simple assembly
- Separate power module

Main Equipment

- Propulsion may be by single or twin waterjet, sterndrive or outboard motors
- Hydraulic cranes or ramps may be fitted

Certification

- Lloyds Hull Structure Certificate
- MCA Workboat Standards
